EDUCATION

University Of Minnesota, Twin Cities

Minneapolis, MN

Bachelor of Science, Computer Science (Expected Graduation: Fall 2025)

Minor: Management of Technology

SKILLS

- **Technical Skills:** Python, Java, C, C++, OCaml, DSA, Git, Linux, JS, Bootstrap, React, Flask, Azure, SQL, CI CD pipelines, Testing.
- **Business Skills:** Marketing and sales, Stock Market, Data Analysis, Strategic Planning, Financial Analysis and budgeting, Business Development.

EXPERIENCE

Teaching Assistant

Minneapolis, MN

University Of Minnesota, Twin Cities

Jun 2024 - Present

- **Facilitated** student learning for over 290 students in software development, resulting in a 20% improvement in project completion rates.
- Software development areas such as program design data structures, debugging, I/O, and coding standards through a comprehensive programming project

Usability Services Assistant

Minneapolis, MN

University Of Minnesota, Twin Cities

Sep 2023 - Present

- **Facilitated** client-stakeholder-participant interactions, leading to a 15% increase in project engagement and satisfaction.
- **Conducted** comprehensive usability studies that improved project efficiency by 20%, optimizing user experience and reducing development time.

Software Engineering Intern

Seattle (remote), USA

MSR Cosmos group

May 2023 - July 2023

- **Optimized** the deployment of enterprise applications on Azure, achieving a 20% reduction in integration time
- **Leveraged** AI tools to analyze large datasets, extracting actionable insights that improved decision-making processes by 15%.
- **Engineered** a Selenium-based test framework, reducing testing time by 25% and increasing test coverage by 30%.
- **Contributed** to ERP consulting and web application modernization projects, enhancing system efficiency and user experience.
- **Implemented** API Gateway for **token validation** and authorization, integrating with **Keycloak for RBAC** and API authentication

PROJECTS

UMN Event Hub (CampusSync)

September 2024 - Present

- Developing a campus-wide event platform to centralize event discovery and streamline campus engagement for the University of Minnesota community.
- Implementing features like personalized **event recommendations**, **interest-based filtering**, and custom registrations to enhance user experience and participation.
- Facilitating event posting for student groups, departments, and organizations, enabling efficient promotion of activities and improved attendance.
- Aimed to increase student involvement by consolidating scattered event information into one accessible platform, improving campus communication and event visibility.

Jewelry Management Software

May 2024 - August 2024

- Spearheaded the development and deployment of comprehensive **stock management software** specifically designed for the jewelry industry, achieving a 30% increase in **operational efficiency** and accuracy.
- Implemented advanced functionalities such as **real-time inventory tracking**, **automated billing**, **invoicing**, and **low-stock alerts**, which streamlined daily operations and reduced manual errors by 25%.
- Developed robust staff management modules that enhanced oversight and resource allocation, resulting in a 15% improvement in store performance.
- Enhanced customer experience by integrating sales performance analytics and **automated purchase** order generation, leading to improved decision-making.

Drone Delivery Simulation

Jan 2024 - April 2024

- Designed and implemented a drone delivery simulation system across the University of Minnesota campus, **simulating real-world logistics** with drones, robots, and human entities.
- Integrated features such as action replay and restore points, which improved simulation accuracy by 30% while generating actionable insights to enhance delivery efficiency within the drone logistics framework across campus.
- Utilized the Memento design pattern for state preservation and the **Singleton pattern** for centralized data collection, ensuring system consistency and scalability.
- Utilized tools like **C++**, **Unity**, Gazebo, for simulation development and data analysis, ensuring a realistic and data-driven approach to drone logistics.
- **Portfolio** - Using HTML, CSS, JavaScript, React
- **Automated fact-checking system** - Using Python, NLTK libraries, TensorFlow, Django, and AWS cloud (Currently working)
- **Emotion-driven Music Playlist Generator** - Using Python, .NET, TensorFlow, OpenCV, Speech recognition, Spotify API, Flask, Django, AWS cloud
- **Minefield Game, Chess Game, Fractal Images, Tetris Game** - Using JAVA, Python and its Data Structures

Book Publication - 25 Phases of Life

July 2023

- Authored and Published a globally accessible book titled '25 Phases of Life', distributed via major platforms including Amazon. The book explores the diverse phases of human life, providing insightful narratives and reflections.
